MEMORANDUM CIRCULAR

No: <u>20</u>

Series of 2022

SUBJECT:

TECHNICAL STANDARDS ON THE GUIDELINES ON THE BIOSECURITY

CLASSIFICATION OF SWINE FARM

The Philippine College of Swine Practitioners released a matrix on how backyard and commercial swine farms can be categorized based on different set of biosecurity parameters.

Annex A provides the biosecurity requirements to achieve Biosecurity Level 1 and 2. There are 4 main areas covered by this matrix: Location, Facilities, Records, Vehicle Movements. Several risk factors with descriptions are listed herein with the corresponding standard practice.

The intention of the biosecurity classification is to provide guidance for farmers on the minimum standards and how to adjust their biosecurity practices based on an applicable level of their farm category. A higher biosecurity level (especially in commercial farms) is encouraged and specific audits may be done to encompass more risk factors.

Assignment of Scores based on the Biosecurity Matrix:

- 1. The scores in each parameter will be assigned based on their risk level:
 - high risk (0 point)
 - moderate risk (1 point)
 - high risk (2 points)
- 2. The farms must satisfy the qualifications set forth in Level 1 (backyard farms) and Level 2 (commercial farms) based on a list of required biosecurity parameters.
 - a. For Backyard Farms, it must be noted that there are 9 yellow boxes which is identified as mandatory scores. A score of zero in any of these yellow boxes will automatically disqualify the farm from Level 1. A minimum score of 18 is needed to comply with Biosecurity Level 1.
 - b. For Commercial Farms, note that there are 12 yellow boxes identified which is identified as mandatory scores. A score of zero in any of these

yellow boxes will automatically disqualify the farm from Level 2. A minimum score of 24 is needed to comply with Biosecurity Level 2.

- A target score of 42 is ideal which means that factors described are assigned with a LOW risk level. This also implies that the farm is 100% compliant to all biosecurity standards.
- 4. The minimum score must be satisfied for the two types of swine farming systems (backyard: 18 points; commercial: 24 points).

Annex A provides a detailed guideline on how biosecurity will be classified based on the type of swine farming system.

For your reference and information.

Done this 18th day of June 2021.

REILDRIN G. MORALES, DVM, MVPHMgt.

Officer-in-Charge, Director
